

Software Development Engineering (Internship)

Android Development

Content of the Seminar cum Training -

- Dart Programming
- Object Oriented Programming using Dart Programming
- Introduction to Flutter Framework
- Types of Architecture in Flutter Programming
- Exploring common widgets: Container, Row, Column, Stack, and ListView
- Handling user input with forms and validation
- State management techniques - SetState and Provider
- Navigation and Routing
- Networking and APIs with JSON Parsing, Serialization, and Deserialization
- Session and Caching Management using Hive Database
- Reusable and Custom Widgets

Pre-requisite Tools and Software's for Training and Internship -

- Flutter SDK
- VS Code
- Android Studio
- Android/iOS Emulators
- Git / GitHub

Project Selection - Students can select any problem statement for their project. If they face difficulty in choosing, the trainer will assist.

Quiz - 4 Numbers of Quiz during training.

Certificate of Training on attending seminar and all quizzes on “Mobile App Development Specialist (Flutter & Native)”

Software Development Engineering (Internship)

Web Development

Content of the Seminar cum Training -

- HTML, CSS & JS website creation
- Understanding the DOM and how can we use to manipulate this html on bases of user input
- Introduction of responsive design
- understanding the basic of js
- Introduction of react js
- Making a todo list to understand the react js
- introduction of Node js and express js
- Making a REST api for todo list
- understanding the types of data storing on client side
- understanding the PWA's

Pre-requisite Tools and Software's for Training and Internship -

- VS Code / any code editor
- github account
- Node installed on the machine

Project Selection - Students can select any problem statement for their project. If they face difficulty in choosing, the trainer will assist.

Quiz - 4 Numbers of Quiz during training.

Certificate of Training on attending seminar and all for quiz on “Full Stack Developer Internship”

Cloud & Devops (Internship)

Content of the Seminar cum Training -

- Introduction to Cloud Computing and AWS account Setup
- AWS Regions and AZ
- AWS IAM (Identity and Access Management) and EC2 (Elastic compute Cloud) Deep Dive
- Introduction to Load Balancers and Auto Scaling Groups
- Introduction to AWS S3: Scalable Storage and AWS RDS: Managed Databases
- AWS Networking Fundamentals
- Containers on AWS -> ECS on Fargate, ECR and EKS
- AWS Monitoring and Audit (CloudWatch, Cloudtrail and Config)
- AWS Lambda and CloudFront
- Introduction to Terraform (Infrastructure as a Code Tool)
- Docker Deep Dive
- Introduction to World of Kubernetes for Container Orchestration

Pre-requisite Tools and Software's for Training and Internship -

- AWS Account
- Docker
- Terraform
- kubeadm

Project Selection - Students can select any problem statement for their project. If they face difficulty in choosing, the trainer will assist.

Quiz - 4 Numbers of Quiz during training.

Certificate of Training on attending seminar and all for quiz on “Cloud and Devops Internship”

Junior AI Trainee (Internship)

AI / ML / Gen AI

Content of the Seminar cum Training -

- Python Programming
- API Development in Python
- Python Flask Framework for APIs
- Your First ML Project
- Leverage your ML Model as APIs using Flask
- Introduction to the world of LLMs
- Run LLM Locally with Ollama
- Your First AI ChatBot
- Introduction to RAG
- Using your AI ChatBot on your own Data.

Pre-requisite Tools and Software's for Training and Internship -

- Python 3.10+
- Ollama
- Google Colab
- Minimum 8GB of RAM Required to run the LLM Model Smoothly Locally

Project Selection - Students can select any problem statement for their project. If they face difficulty in choosing, the trainer will assist.

Quiz - 4 Numbers of Quiz during training.

Certificate of Training on attending seminar and all for quiz on “Machine Learning and AI Internship using Python”
